Floq

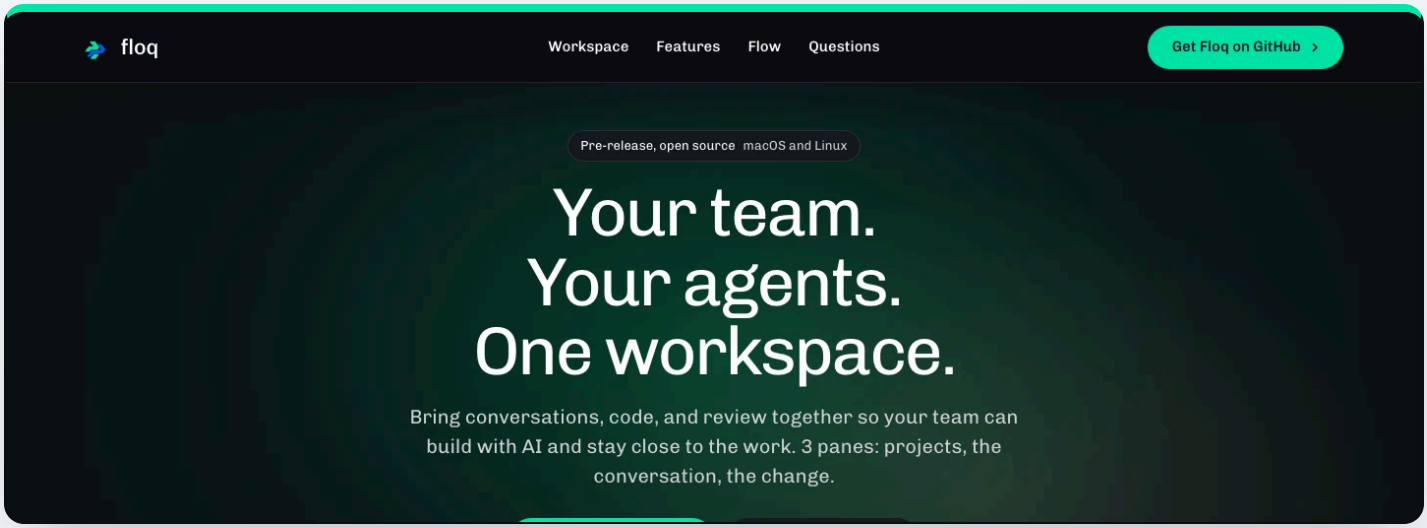

AI TOOLS PRE-RELEASE

FREE & OPEN SOURCE

Floq

Your team. Your agents. One workspace.

A development workspace where developers and AI agents work on the same change. Projects on the left, the conversation in the centre, the code changes, preview and review on the right. Each workspace is its own git worktree, and the file changes come from git itself, never from what the agent claims.

01 Four agents, one workspace

Claude Code, Codex, Cursor and OpenCode, with Plan or Fast per instruction.

02 Changes from git, not from claims

Every touched file with its additions and deletions from git diff.

03 Run it where it changed

Setup, Run and Terminal execute inside the workspace on a real terminal.

04 Ship from the same pane

Pull request status and merge beside the code, derived from gh.

WHO IT'S FOR

Developers, engineering leads and software teams adopting AI-assisted development.

PRICING

Free

Open source, license pending

GOOD TO KNOW

- macOS and Linux, Tauri 2 + Rust + React
- Build: pnpm install, pnpm tauri dev
- github.com/Titanium-Devops/floq
